Education

University of Maryland College Park

Expected Graduation Fall 2026

B.S Computer Science (Machine Learning Track), Minor in Statistics, GPA: 3.4/4.0

Coursework: Intro to Machine Learning, Intro to Data Science, Applications of Probability & Statistics, Linear Algebra, Algorithms, Programming Languages, Computer Systems, Object-Oriented Programming, Web Development

Experience

U.S Department of Treasury

February 2025 – April 2025

Data Science Intern— SQL

- Created interactive data reports using SQL and SharePoint, incorporating visualizations to enhance data interpretation.
- Designed dashboards and automated reporting tools to streamline financial data analysis and presentation.
- Collaborated with economists and data analysts to provide insights on **large-scale datasets**

Dux (early-stage startup)

May 2024 – Aug 2024

Software Engineer Intern— MongoDB, Node, Express, React, Next, TypeScript

- Integrated the PayPal API into the platform to create an automatic payment system, reducing payment processing time 20%.
- Streamlined database architecture by eliminating redundant schema, simplifying transaction data queries by 50%
- Designed and implemented 6+ settings pages and interactive guide cards to display guide data, enhancing user experience
- Built a scheduled payout system using Agenda.js, automating guide payments and improving payout reliability

The Diamondback

November 2024 – Present

Software Engineer — Astro, Node, Express, JavaScript, SQL, Jira

- Developed 3 dynamic components, including a footer, to showcase 12 executive orders and boost public accessibility
- Led the development of data visualizations for an apartment comparison tool, enabling users to compare features and pricing

Bitcamp

August 2023 – Present

Marketing Organizer

- Successfully organized the Bitcamp Hackathon at UMD, attracting over 2000 hackers and participants.
- Produced compelling promotional videos that garnered over 100,000 views, effectively boosting event turnout
- Coordinated marketing strategies and partnerships to ensure the execution of the largest hackathon in the region.

Projects

NBA Schedule Predictor— Python, Pandas, Scikit-Learn, Matplotlib

[github.com/schedule](https://github.com/sameerchawla/nba-schedule-predictor) 🔗

- Trained a **machine-learning model** (Random Forest) with SK-Learn to predict NBA matchups using game numbers
- Preprocessed and cleaned 10+ years of NBA game data, improving model accuracy by 20%
- Optimized accuracy by experimenting with train-test splits (80-20, 90-10) and cross-validation techniques

Academy+ — PyTorch, Vue

[github.com/Academy+](https://github.com/sameerchawla/academy-plus) 🔗

- Built an AI-powered learning platform inspired by Khan Academy, generating personalized course outlines across 10+ subjects
- Fine-tuned a PyTorch model to recommend tailored learning paths based on user progress and performance
- Designed an interactive roadmap to visualize course pathways and integrated salary insights using Chart.js

Shell — C, Linux

- Developed a custom Unix-like shell in C with features including command execution and input/output redirection
- Implemented a command parsing mechanism to handle user inputs and execute external commands.
- Integrated process management features include job control, background, and foreground execution.

JSDTimer — React Native, Figma

- Engineered a Rubik's Cube timer application using React Native, integrating data analytics and visualization capabilities.
- Developed comprehensive data processing and analysis functions to generate and display various solutions statistics.
- Designed and implemented all user interface components, including settings and home pages, ensuring an intuitive user experience using Figma

Skills

Languages: Python, Java, C, SQL, JavaScript, OCaml

Technologies: PyTorch, Pandas, NumPy, Flask, MATLAB, React, Express, Node, Vue

Tools: Git, Agile, Jira, Docker, AWS (SageMaker, EC2)
