Education

University of Maryland College Park

Expected Graduation Winter 2026

B.S Computer Science (Machine Learning Track), B.S Mathematics

Minor in Philosophy, GPA: 3.4/4.0

Coursework: Probability & Statistics, Data Science, Computer Architecture, Computer Systems, Object-Oriented Programming, Web Development, Linear Algebra, Algorithms, Harvard CS50

Experience

Data Engineer Intern

Expected January 2025 – April 2025

U.S Treasury — Python, Pandas, SQL

- Collaborating with the data engineering team to develop a data scraper in Python
- Designing and setting up SQL databases to store and manage large datasets for reporting and analysis.
- Utilizing Pandas for data analysis and working with financial datasets.

Software Engineer Intern

May 2024 – Aug 2024

Dux (early-stage startup) — MongoDB, Node, Express, React, Next

- Integrated the PayPal API to automate payments, successfully managing over **100 users and guides** and streamlining payment processing, resulting in a **20% reduction in user friction during checkout**.
- Designed the transaction schema and optimized NoSQL database logic (MongoDB) for efficient data storage
- Consolidated and organized code, reducing over **200 lines of JavaScript** and streamlining models and database structure for improved maintainability.

Backend Developer

November 2024 – Present

The Diamondback — Node, Express, JavaScript, SQL

- Developing and maintaining backend services for *The Diamondback* using **Node.js and Express**, ensuring scalability and performance for future projects.
- Leading the development of an apartment comparison tool, which allows users to compare various apartments

Projects

Academy+ — Vue, Python, Express, Node

github.com/Academy+ 

- Developed a learning platform akin to Khan Academy, generating personalized courses with an auto-generated course outline
- Implemented a visual road map that auto-populates with similar classes to the one requested by the user

JSDTimer — React Native

github.com/JSDTimer-app 

- Led product development for a Rubik's Cube timer app, defining features, prioritizing tasks, and developing key features such as the timer and data analysis
- Designed the app's logo, UI/UX layout, and visual themes in Figma

Shell — C, Linux

- Implemented several built-in shell commands, including job control and background process handling
- Used low-level memory management techniques and process control to handle 100+ concurrent processes

Technologies

Languages: Java, Python, C, C#, SQL, NoSQL, JavaScript, OCaml

Technologies: XCode, React Native, React, Vue, Express, Node, Flask, MySQL, MATLAB, Pandas, PyTorch, AWS (SageMaker)

DevOps: Git, Agile, Scrum, Jira, Kanban
